(Funds with AUM of more than ₹125 crores as on 31st October 2011)

A new look at life

IN THIS POLICY, THE INVESTMENT RISK IN INVESTMENT PORTFOLIO IS BORNE BY THE POLICYHOLDER.

Saravana Kumar
Chief Investment Officer

Message from CIO's Desk

On October 25, 2011, the RBI raised the repo rate by 25 bps along expected lines to 8.50% but the market was positively surprised by its explicit guidance for a pause in rate hikes in the medium term. India's exports for the first half of financial year April-September 2011 registered a robust performance clocking an impressive growth of 52% at USD 160 billion. Wholesale Price Index (WPI) inflation for the month of September 2011 clocked 9.72%. Equity markets have continued to witness earnings downgrades as the consensus earnings estimates for MSCI India has been further reduced over the month by around 1% and around 2% for financial year ending March 2012 and March 2013 respectively.

Equity Funds

Life Equity Fund (ULIF 001 04/02/04 TEL 110)

Asset Allocation

Guaranteed NAV Funds

The fund would be predominantly invested in equity at inception, wherein the dynamic asset allocation mechanism allocates the portfolio between equity and debt. This dynamic asset allocation is based on the performance of equity markets and movements in interest rates. The equity allocation may be reallocated to debt if the equity markets or interest rates fall, to safeguard the guarantee.

Over time, the asset mix will predominantly shift to debt to protect the guarantee. This dynamic asset allocation process will drive the returns generated by the Apex Return Lock-in Fund. The dynamic asset allocation shifts the allocation of the fund from an equity bias to a debt bias, overtime. This would mean that the Guaranteed NAV would not mimic the highest level of the equity market, over the period the guarantee is applicable. Any unexpected and sharp falls in equity market and/ or interest rates, during the period the guarantee is applicable, may trigger the allocation to completely move towards debt, to protect the highest NAV achieved prior to the fall. Overall, it is an ideal fund for an investor who wants to take advantage of high returns in a positive market scenario while safe-guarding the investment during any downturn.

Equity Outlook

The global equity markets rallied over the month of October 2011, with the MSCI Emerging markets index surging 13% even as the MSCI India gained 8% over the month in US dollar terms. The benchmark indices, BSE Sensex and CNX Nifty gained 7.6% and 7.8% respectively even as the CNX Midcap index put on a relatively modest 2.4% over the month.

Globally, the rally in risk assets can be best described as a relief rally, post the EU summit, on expectations of some near term solution to the sovereign credit crises as well as the receding possibility of US recession, as the US third quarter GDP growth came in at a reasonable 2.5%. On the domestic front, the RBI guidance of signaling a pause in monetary tightening cycle acted as a catalyst for investor sentiment.

The month of October 2011 saw FIs resume their net purchases of Indian equities after a two month lull, as they bought around USD 480 million in October 2011 even as Insurance companies were net sellers to the tune of USD 423 million in October 2011, domestic mutual funds being marginal net sellers at USD 43 million.

As the second quarter earnings season gathers momentum, it is apparent that the interest rate increases pushed through by the RBI over the last 18 months have dented corporate margins, even as they have managed robust top line growth, on the back of high inflation. Of the 90 companies among the BSE 200 companies that have announced their second quarter results so far, the sales growth (ex Banking and financial services companies) has been a robust 25.6% year on year and 1.6% quarter on quarter. Profits for the overall universe have meanwhile climbed by 8% year on year but are down 7% quarter on quarter. There is clearly evidence of a year on year fall in operating margins, indicating continued stress to earnings faced by corporate India, though it is too early to discern sectoral trends.

Overall, the quarterly earnings performance reflects the underlying macro trend of a strong rural consumption on the back of good monsoons, high MSPs and increased rural led government spending. It also reflects a weak capex cycle due to high interest rates and muted business confidence of corporate India to undertake significant expansion in an environment of high policy uncertainty.

The equity markets have continued to witness earnings downgrades as the consensus earnings estimates for MSCI India has been further reduced over the month by around 1% and around 2% for financial year ending March 2012 and March 2013 respectively to 16% for each of the financial years.

In the near term, the Indian markets could witness bouts of volatility, primarily from the developments in the Euro zone. The European nations are striving towards preventing contagion risks to large economies like Italy and Spain, on the back of increasing uncertainty in Greece, triggered by the Greek Prime minister's call of a referendum on the EU summit deal.

We believe that the equity markets are reasonably priced at around 13 times one year forward price earnings, lesser than the 5 year averages of one year forward price earnings, offering an attractive entry point for a long term investor.

Debt Outlook

The month of October 2011 saw the benchmark 10 year Government security (G-sec) climbing to a 3 year high, starting the month at 8.44% and hardening by 44 bps to close the month at 8.88%, at the highest yield levels for the month. This extraordinary hardening can be largely attributed to the announcement in the last week of September of additional government borrowing of close to ₹52,900 crores in the second half of FY 2012, whose full impact was felt in the month of October. The yields on the G-sec had eased off to 8.68% during the month soon after the RBI guidance in the second quarter review of the monetary policy, signaling a near term pause in the rate hike cycle.

The corporate bond yield hardening was comparatively muted at 17 bps in October 2011 from 9.58% to 9.75%, primarily due to a lack of supply of PSU bonds in the long end, during the month. As a consequence, the corporate bond spread over the 10 year G-sec, which was in the range of around 95-100 bps over the month of September, came off sharply to just 70 bps in October.

The systemic liquidity deficit remained in the RBIs comfort zone of within 1% of banks' net demand and time liabilities (NDTL), consistent with the anti-inflationary stance of monetary policy. This year so far, the money supply (M3) and credit growth have been above the indicative trajectories of the Reserve Bank but going forward, the RBI expects the monetary aggregates to evolve along the earlier projected trajectory at M3 growth projection for 2011-12 at 15.5% and non-food credit growth at 18%.

The Government borrowings for October 2011 stood at ₹43,000 crores in three auctions, out of the revised second half borrowing of ₹2,20,000 crores. On October 31st, there was an announcement of the launch of a new 10 year G-sec, to be traded a week afterwards, which would become the new benchmark G-sec due its higher liquidity.

Wholesale Price Index (WPI) inflation for the month of September 2011 clocked 9.72%, close to the consensus of 9.8% and marginally below the August 2011 reading of 9.78%. The headline WPI inflation is expected to remain elevated at 9% plus levels in October and November, before trending lower.

The Reserve Bank of India (RBI) in its second quarter review of the monetary policy for FY 2012 has increased the repo rate by 25 basis points from 8.25% to 8.5% along expected lines. The RBI sees the inflation declining, starting December 2011, as indicated by the moderation in the inflation momentum indicators, particularly the de-seasonalised quarter-on-quarter headline and core inflation measures. The RBI was concerned about the moderating growth, mainly due to the cumulative impact of its past monetary policy actions and expects to give due consideration to growth risks, as inflation trends down in the medium term and stabilizes at a lower level.

The RBI has maintained the inflation target of 7% by March 2012 and expects further moderation in the first half of 2012-13 due to the combined effect of downward commodity price movements and the cumulative impact of monetary tightening. RBI opines that due to the expected lower trajectory for inflation, further rate hikes may not be warranted, almost signaling the end of the current rate hike cycle in the near term.

There would be some easing of yields in the medium term due to the explicit signaling of a pause in the policy rate hike cycle by the RBI, though in the near term, the increased second half borrowing would put pressure on the benchmark 10 year G-sec and keep the new 10 year G-sec in a range of 8.65-8.90% for the month.
