Valuation Bases as on March 31, 2008

How the policy data needed for valuation is accessed

The company employs several systems for its individual business, group life business, credit life business, pension business and for accounting. The systems are, in general, accurate and reliable and produce reports and data that can be relied upon for financial reporting purposes.

For individual life business, data is extracted from each of the systems in a clearly defined manner in order to remove data that is not relevant to the calculation (e.g. address of policyholder since we do not have assumptions varying by area). The data is then validated for accuracy.

How the valuation bases are supplied to the system

Then a conversion to Prophet friendly format takes place using the Data Conversion System (DCS). Prophet is the main valuation software and system that is used to calculate actuarial liabilities. It has a valuation workspace that is locked and can only be changed by designated personnel. Prophet is used as the product-pricing tool as well. This acts as a reasonable check for the valuation module. The final results are checked for reasonableness.

Individual Life Business

Participating Business

The actuarial assumptions used to value the policy liabilities vary, depending on the type of product being valued.

Individual life participating business is valued by the prescribed Gross Premium Valuation (GPV) Method. The assumptions used for the valuation reflect the expected future experience in respect of various parameters including mortality/morbidity, interest, expenses, and incorporate a margin for prudence.

The valuation interest rate used is 6.75%.

The mortality assumption ranges from 90% to 180% of the prescribed mortality table i.e. the Indian Assured Lives Mortality (94-96) (Modified Ultimate) table, depending on the

Tata Aig Life Insurance Company Ltd.,

Form L 42- Valuation Bases as on March 31, 2008

type of product. Morbidity rates range from 312.50% to 593.75% of the prescribed morbidity table CIBT93.

The future simple and compound reversionary bonus rates assumed vary from 3.05% to 6.08% of sum assured and attaching bonuses as applicable and future terminal bonuses assumed vary from 20% - 25% of reversionary bonuses for certain plans and for other plans are 20% - 37% of sum assured.

The future cash dividend scales assumed vary from 3.15 to 22.70 per thousand of the sum assured.

Premium related expenses are assumed to be 2.552% of premium and per policy expenses range from Rs. 244.35 to Rs. 421.30. Further, to allow for inflation, per policy expenses are assumed to increase each year at a rate of 5.75% per annum over the term of the policy.

Policyholders' reasonable expectations have been allowed for by way of provision for future bonuses and dividends consistent with the assumed experience in the valuation basis.

Taxation has been assumed at 12.5% plus 10% surcharge and 3% cess (i.e. 14.1625%) and shareholder transfers equal to one-ninth of the cost of bonus.

Provision for IBNR has been made based on 3 months of claims.

Non-Participating Business

The actuarial assumptions used to value the policy liabilities vary, depending on the type of product being valued.

Individual life non-participating business is valued by the prescribed Gross Premium Valuation (GPV) Method.

The valuation interest rate used is 6.25%.

The mortality assumption ranges from 90% to 264% of the prescribed mortality table i.e. the Indian Assured Lives Mortality (94-96) (Modified Ultimate) table, depending on the type of product.

Premium related expenses are assumed to range from 1.1% to 2.552% and per policy expenses range from Rs. 31.90 to Rs. 421.30. Further, to allow for inflation, per policy expenses are assumed to increase each year at a rate of 5.75% per annum over the term of the policy.

Policyholders' reasonable expectations have been allowed for by way of provision for future bonuses and dividends consistent with the assumed experience in the valuation basis.

Shareholder transfers equal to one-ninth of the cost of bonus.

Provision for IBNR has been made based on 3 months of claims.

Unit-Linked Business

For Individual life unit-linked business, the total reserve is the sum of two components i.e. unit reserve and non-unit reserve. Unit reserves are set, based on the number of units and the unit prices as at March 31, 2008. The non-unit reserves are set using a prospective method, that requires projection of future cash flows, that allow for items including premiums, death benefits (over and above the value of units), fund management and other charges. Charges assumed are as per the contract provisions.

The unit-growth rate assumed for the projections depend on the type of unit fund/s chosen for each policy and vary from 4% to 9%. The valuation interest rate for discounting the cash flows is 6.25%.

The mortality rates range from 96% to 180% of the prescribed mortality table i.e. the Indian Assured Lives Mortality (94-96) (Modified ultimate) table, depending on type of product. The morbidity rates used are 187.5% of the prescribed morbidity table CIBT93.

Premium related expenses are assumed to be 2.464% and per policy expenses are assumed to range from Rs. 215.64 to Rs. 371.80. Further, to allow for inflation, per policy expenses are assumed to increase each year at a rate of 5.75% per annum over the term of the policy.

Provision for IBNR has been made based on 3 months of expected claims strain.

Health Business

The actuarial assumptions used to value the policy liabilities vary depending on the type of product being valued.

The Unearned Premium Reserve (UPR) method to value renewable contracts and the GPV method for other contracts. For GPV contracts the details are given below.

The valuation interest rate used is 6.25%.

Tata Aig Life Insurance Company Ltd.,

Form L 42- Valuation Bases as on March 31, 2008

The mortality assumption is 180% of the prescribed mortality table i.e. the Indian Assured Lives Mortality (94-96) (Modified ultimate) table, depending on type of product. The morbidity rate is 187.5% of the prescribed morbidity table CIBT93.

Premium related expenses are 4.4% and per policy expenses are Rs. 275. Further, to allow for inflation, per policy expenses are assumed to increase each year at a rate of 5.75% per annum over the term of the policy.

Provision for IBNR has been made based on 3 months of claims.

Group Business

The group business is valued using the Unearned Premium Reserve (UPR) basis.

Key Changes in the Valuation Basis

Mortality

Mortality assumptions have been reviewed following a mortality investigation with assumptions now in the range 90% - 264% IALM 94-96 as compared to 90% - 240% IALM94-96 for the previous valuation.

Expenses

Expense assumptions have been based on the results of the Company's expense study as opposed to pricing basis previously.

Bonuses

Future bonus allowances have been reviewed in accordance with the changes in assumed experience.
